

$$\begin{aligned}
\langle g^A \cdot g^B \rangle &= \langle g^A \cdot \bigcirc g^B \rangle = \int^A \int^B \langle \bigcirc g^A g^B \rangle = \int^A \int^B \langle g^A \cdot g^B \rangle
\end{aligned}$$

Diagrammatic representation of the equation above:

- Term 1:** A black angle bracket containing a red dot labeled g^A and a red dot labeled g^B .
- Term 2:** A black angle bracket containing a red dot labeled g^A , a blue circle with a blue g above it, and a red dot labeled g^B .
- Term 3:** A black angle bracket containing two yellow integrals labeled $\int^A$ and $\int^B$, followed by a blue circle with a blue g above it, a red dot labeled g^A at the bottom, and a red dot labeled g^B at the top.
- Term 4:** A black angle bracket containing two yellow integrals labeled $\int^A$ and $\int^B$, followed by a red dot labeled g^A and a red dot labeled g^B .
